

Week-6

Aim: Create a MySQL database for the data to be stored after registration

Code:

Queries-

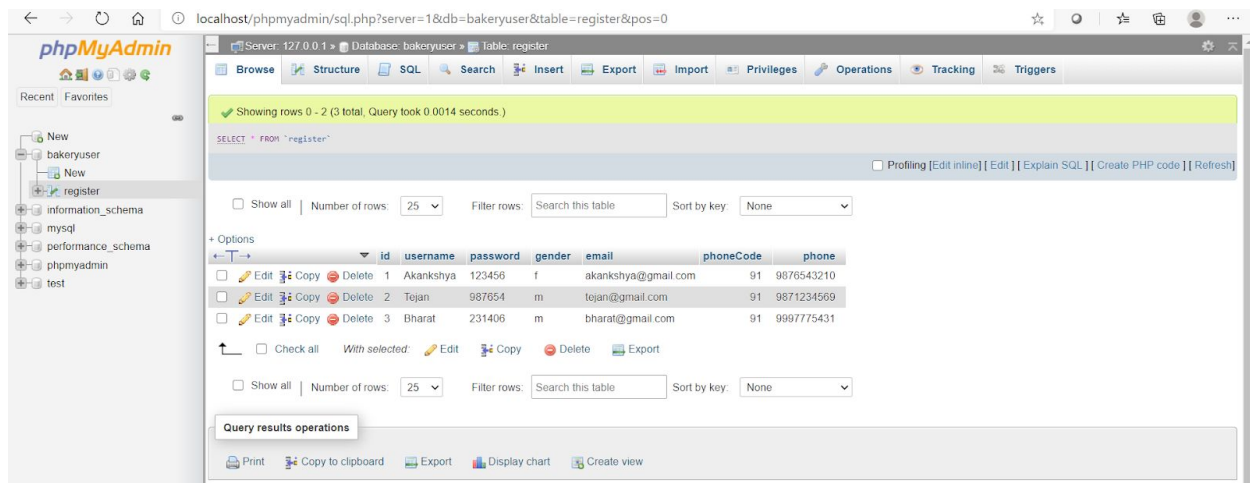

```
CREATE table bakeryuser values (id int PRIMARY,  
                                username varchar(20),  
                                password varchar(20),  
                                gender varchar(1),  
                                email varchar(40),  
                                phoneCode int,  
                                phone bigint);
```

```
INSERT into bakeryuser values ('Akankshya', '123456', 'f',  
'akankshya@gmail.com', +91, 9876543210);
```

```
INSERT into bakeryuser values ('Tejan', '987654', 'm', 'tejan@gmail.com',  
+91, 9871234569);
```

```
INSERT into bakeryuser values ('Bharat', '231406', 'm', 'bharat@gmail.com',  
+91, 9997775431);
```

Output:

The screenshot shows the phpMyAdmin interface. The left sidebar displays the database structure with 'bakeryuser' selected. The main panel shows the 'register' table with the following data:

	id	username	password	gender	email	phoneCode	phone
<input type="checkbox"/>	1	Akankshya	123456	f	akankshya@gmail.com	91	9876543210
<input type="checkbox"/>	2	Tejan	987654	m	tejan@gmail.com	91	9871234569
<input type="checkbox"/>	3	Bharat	231406	m	bharat@gmail.com	91	9997775431
